Education

University of North Carolina at Charlotte 05/2023 – 12/2024

Master of Science in Computer Science

University of North Carolina at Charlotte 06/2022 – 12/2023

Bachelor of Science in Computer Science

Professional Experience

Brooksource (Charter Communications) 10/2025 – Present

Jr. ETL Developer

Charlotte, NC

- Built and maintained ETL pipelines supporting enterprise data workflows using Python, Airflow, and Apache NiFi.
- Contributed to CI/CD pipelines in GitLab, enabling automated deployment of data solutions across environments.
- Migrated legacy on-prem shell scripts to Python-based ETL jobs, improving maintainability and cloud readiness on AWS.
- Researched and implemented Parquet-to-CSV conversion techniques using Polars, PyArrow, and DuckDB, reducing processing time by ~50%.
- Monitored production data jobs, assisted in troubleshooting failures, and supported root-cause analysis under senior engineer guidance.
- Collaborated with cross-functional teams to design scalable, reliable data pipelines aligned with enterprise standards.

Ernst & Young 03/2025 – 10/2025

AI & Data Technology Consultant

Charlotte, NC

- Developed backend data services using Python and FastAPI, integrating cloud services (Azure OpenAI, Cosmos DB).
- Designed and maintained data processing workflows that transformed structured JSON inputs into analytical outputs.
- Authored technical documentation for system architecture, APIs, and data flows to support long-term maintainability.
- Worked closely with senior engineers and stakeholders to deliver production-ready data solutions.

Ernst & Young 06/2024 – 07/2024

AI & Data Technology Consulting Intern

Cleveland, OH

- Assisted with data analytics and AI-driven solutions, applying NLP and LLMs to extract business insights.
- Supported integration of data solutions into existing product pipelines while following governance standards.

Projects

SkyGazer 08/2023 – 12/2023

- Developed an application that integrated external APIs to retrieve and analyze weather and astronomical data.
- Designed reusable components for data ingestion and presentation.
